DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-10 rejected under 35 U.S.C. 103(a) as being unpatentable over Jiang et al. (US 2002/0113921) in view of Juestel (6,573,654) further in view of den Boer et al. (6,008,872).

Regarding Claims 1-10, Jiang et al. disclose high brightness color liquid crystal display panel employing light recycling therein where a reflective color filters using layers of cholesteric liquid crystals with two different center wavelengths and band-widths per layer are stacked in two layers to provide colored light for displays. With broadband polarizing filter overlapping other filters in the stack a black matrix can be provided by reflecting all colors and transmitting no light in the overlapping areas. When broadband reflective cholesteric liquid crystals are used two primary colors can be reflected in the same pixel of a display making reflective layers with two reflective portions per layer possible. Color displays having three linear sub-pixels with three primary colors or with four sub-pixels of white, blue, green, and red in a pixel with two colors in a top row and two colors on a bottom row are made with two colors per layer in two layer stacks. Jiang et al. fail to disclose the required filter structure and the required absorbing structure. However, Juestel et al. disclose plasma picture screen with a terbium activated phosphor where the required filter structure is disclosed. Furthermore, den Boer et al. disclose

Art Unit: 2826

high aperture liquid crystal display including thin film diodes and method of making same where the required absorbing structure is disclosed.

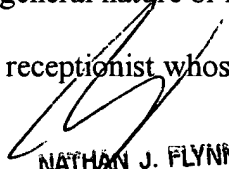

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required filter and absorbing structure in Jiang et al. as taught by Juestel et al. and den Boer et al. respectively in order to have a liquid crystal display with better performance.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (703) 305-3868. The examiner can normally be reached on M - F 8:00 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (703) 308-6601.
